Abstract:

A polypeptide for use in a vaccine against Bordetella pertussis, B. parapertussis or B. bronchiseptica contains an epitope selected from (a) the amino acid sequence coded for by nucleotides 1885 to 1902 of the P.69 gene of B. pertussis CN2992; (b) the corresponding amino acid sequence of another strain of B. pertussis or of a strain of B. parapertussis or B. bronchiseptica; and (c) a modified version of sequence (a) or (b) which has substantially the same antigenicity. The polypeptide is no more than 50 amino acid residues long or is a chimaeric protein composed of a carrier protein sequence and a sequence of no more than 50 amino acid residues which contains the required epitope.

English Abstract

The present invention relates to oil-in-water emulsions, their use as adjuvants, and pharmaceutical, immunologic, or vaccine compositions that may comprise the same. In one embodiment, the oil-in-water (OAV) emulsion may comprise an aqueous solution containing an immunogen, a mineral oil, a non-ionic lipophilic ethoxylated fatty alcohol and a non-ionic hydrophilic surfactant. In another embodiment, the oil-in-water (OAV) emulsion may comprise an aqueous solution containing an immunogen, a non-ionic lipophilic surfactant, a mineral oil and a non-ionic hydrophilic ethoxylated fatty alcohol. The present invention also encompasses a method of making a vaccine composition using the adjuvant of the instant invention, the vaccine composition so obtained and methods of use.

French Abstract

La presente invention concerne des emulsions huile dans l'eau, leur utilisation en tant qu'additifs, et des compositions pharmaceutiques, immunologiques ou de vaccination qui comprennent ces emulsions. Dans un mode de realisation, l'emulsion huile dans l'eau (oil-in-water / OAV) peut comprendre une solution aqueuse qui contient un immunogene, une huile minerale, un alcool gras ethoxyle lipophile non ionique et un tensioactif hydrophile non ionique. Dans un autre mode de realisation, l'emulsion huile dans l'eau (OAV) peut comprendre une solution aqueuse contenant un immunogene, un tensioactif lipophile non ionique, une huile minerale et un alcool gras ethoxyle hydrophile non ionique. L'invention a egalement pour objet un procede pour produire une composition de vaccination au moyen de l'additif de l'invention, la composition ainsi obtenue, et des procedes d'utilisation.

English Abstract

This invention relates to vaccines and methods for protecting dogs
against disease caused by *Leptospira bratislava*. This invention also
relates to combination vaccines and methods for protecting dogs against
disease or disorder caused by canine pathogens, for example, infectious
tracheobronchitis caused by *Bordetella bronchiseptica*, canine
distemper caused by canine distemper (CD) virus, infectious canine
hepatitis (ICH) caused by canine adenovirus type 1 (CAV-1), respiratory
disease caused by canine adenovirus type 2 (CAV-2), canine parainfluenza
caused by canine parainfluenza (CPI) virus, enteritis caused by canine
coronavirus (CCV) and canine parvovirus (CPV), and leptospirosis caused
by *Leptospira bratislava*, *Leptospira canicola*, *Leptospira grippotyphosa*,
Leptospira icterohaemorrhagiae or *Leptospira pomona*.

French Abstract

L'invention concerne des vaccins et des methodes de protection de chiens
contre une maladie provoquee par la bordetellose feline. (*Bordetella*
bronchiseptica). Cette invention a aussi pour objet des melanges de
vaccins et des methodes de protection de chiens contre une maladie ou un
trouble provoque par des agents pathogenes canins, par exemple, une
tracheo-bronchite infectieuse causee par la bordetellose feline, la
maladie de Carre engendree par le virus de cette meme maladie, une
hepatite canine infectieuse causee par l'adenovirus canin de type
1 (CAV-1), une maladie respiratoire provoquee par l'adenovirus canin de
type 2 (CAV-2), la parainfluenza canine engendree par le virus de la
parainfluenza canine, l'enterite provoquee par le coronavirus canin et le
parvovirus canin, et la leptospirose causee par *Leptospira bratislava*,
Leptospira canicola, *Leptospira grippotyphosa*, *Leptospira*
icterohaemorrhagiae ou *Leptospira pomona*.

English Abstract

This invention relates to vaccines and methods for protecting dogs against disease caused by Bordetella bronchiseptica. This invention also relates to combination vaccines and methods for protecting dogs against disease or disorder caused by canine pathogens, for example, infectious tracheobronchitis caused by Bordetella bronchiseptica, canine distemper caused by canine distemper (CD) virus, infectious canine hepatitis (ICH) caused by canine adenovirus type 1 (CAV-1), respiratory disease caused by canine adenovirus type 2 (CAV-2), canine parainfluenza caused by canine parainfluenza (CPI) virus, enteritis caused by canine coronavirus (CCV) and canine parvovirus (CPV), and leptospirosis caused by Leptospira Bratislava, Leptospira canicola, Leptospira grippotyphosa, Leptospira icterohaemorrhagiae or Leptospira pomona. The vaccines of the present invention include a Bordetella bronchiseptica p68 antigen.

French Abstract

L'invention concerne des vaccins et des procedes permettant de proteger les chiens contre la maladie provoquee par la Bordetella Bronchiseptica.

Elle concerne également des vaccins de combinaison et des procédés pour protéger les chiens contre la maladie ou des troubles provoqués par des pathogènes canins, par exemple, la trachéobronchite infectieuse provoquée par la Bordetella Bronchiseptica, la maladie de Carré provoquée par le virus (CDV), l'hépatite canine infectieuse (ICH) provoquée par l'adenovirus canin type 1 (CAV-1), la maladie respiratoire provoquée par l'adenovirus canin type 2 (CAV-2), la parainfluenza provoquée par le virus de la parainfluenza canine (CPI), l'entérite provoquée par le coronavirus canin (CCV) et le parvovirus canin (CPV), ainsi que la leptospirose provoquée par leptospira Bratislava, leptospira grippotyphosa, leptospira icterohaemorrhagiae ou leptospira pomona. Les vaccins selon l'invention comprennent un antigène Bordetella bronchiseptica p68.

English Abstract

This invention relates to novel human polynucleotides and variants thereof, their encoded polypeptides and variants thereof, to genes corresponding to these polynucleotides and to proteins expressed by the genes. The invention also relates to diagnostic and therapeutic agents employing such novel human polynucleotides, their corresponding genes or gene products, e.g., these genes and proteins, including probes, antisense constructs, and antibodies.

French Abstract

L'invention porte sur de nouveaux polynucleotides humains et leurs variantes, sur les polypeptides codes par eux et leurs variantes, sur les genes correspondant a ces polynucleotides, et sur des proteines exprimees par ces genes. L'invention porte egalement sur des agents diagnostiques et therapeutiques utilisant lesdits nouveaux polynucleotides humains et les genes et produits geniques correspondants, ces genes et proteines comportant des sondes, des produits d'assemblage et des anticorps.

LANGUAGE: English

ABSTRACT: DERWENT ABSTRACT: NOVELTY - A new vaccine composition comprises
%Bordetella% %bronchiseptica% %p68% antigen and an adjuvant effective
to protect dogs against %Bordetella% %bronchiseptica%. DETAILED
DESCRIPTION - An INDEPENDENT CLAIM is included for a method of
protecting dogs against %Bordetella% %bronchiseptica%. BIOTECHNOLOGY -
Preferred Vaccine Composition: The vaccine composition comprises
%Bordetella% %bronchiseptica% %p68% antigen and an adjuvant effective
to protect dogs against %Bordetella% %bronchiseptica%. The %Bordetella%
%bronchiseptica% %p68% antigen comprises the 602-amino acid sequence
and is produced recombinantly. The adjuvant comprises Quil A and
cholesterol. The vaccine is a combination vaccine for immunizing dogs
against canine pathogens and comprises: (a) a preparation of an
attenuated strain of canine distemper (CD) virus, an attenuated strain
of canine adenovirus type 2 (CAV-2), an attenuated strain of canine
parainfluenza (CPI) virus and an attenuated strain of canine parvovirus
(CPV); (b) an inactivated whole or partial cell preparation of a strain
of canine coronavirus (CCV); (c) a %Bordetella% %bronchiseptica% %p68%
protein; (d) a Leptospira bacterin comprising a Leptospira cell
preparation of at least one Leptospira species consisting of Leptospira
ipoptyphosa, Leptospira bratislava, Leptospira canicola, Leptospira
grippytyphosa, Leptospira icterhaemorrhagiae and Leptospira Pomona; and
(e) an adjuvant. Preferred Method: Protecting dogs against %Bordetella%
%bronchiseptica% comprises administering to a dog the vaccine

composition. ACTIVITY - Virucide. The experimental vaccine antigen was a recombinant %p68% outer membrane protein comprising 602-amino acid sequence of the %Bordetella% %bronchiseptica% produced by Escherichia coli strain LW68. Sixty male and female canine puppies were randomly allocated to one of six treatment groups (10 per group). Animals were vaccinated on Day 0 with either the placebo or the experimental vaccine. A second vaccine was administered on Day 21. The first vaccine was administered subcutaneously in the right neck and the second vaccine was administered subcutaneously in the left neck. All animals were challenged 28 days after the second vaccination with an aerosol of %Bordetella% %bronchiseptica%. The vaccinated dogs coughed significantly less than the placebo. MECHANISM OF ACTION - Vaccine. USE - The vaccine is useful for immunizing dogs against canine pathogens, e.g., canine distemper (CD) virus, canine adenovirus type 2 (CAV-2), canine parainfluenza (CPI) virus, canine parvovirus (CPV), canine coronavirus (CCV), %Bordetella% %bronchiseptica%, Leptospira ippotyphosa, Leptospira bratislava, Leptospira canicola, Leptospira grippotyphosa, Leptospira icterhaemorrhagiae or Leptospira Pomona. ADMINISTRATION - Dosage comprises 15-25 micrograms/kg body weight. The composition is administered via oral or parenteral route. EXAMPLE - No relevant examples given.(78 pages)

Abstract: A polypeptide for use in a vaccine against Bordetella pertussis, B. parapertussis or B. bronchiseptica contains an epitope selected from (a) the amino acid sequence coded for by nucleotides 1885 to 1902 of the P.69 gene of B. pertussis CN2992; (b) the corresponding amino acid sequence of another strain of B. pertussis or of a strain of B.parapertussis or B. bronchiseptica; and (c) a modified version of sequence (a) or (b) which has substantially the same antigenicity. The polypeptide is no more than 50 amino acid residues long or is a chimaeric protein composed of a carrier protein sequence and a sequence of no more than 50 amino acid residues which contains the required epitope.
